Cover legend: This image shows Nestin-GFPexpressing cells in the dentate gyrus of the adult
mouse hippocampus, rendered using a depth-coding
palette. A small proportion of Nestin-GFP-expressing
cells coexpress the epithelial growth factor receptor
(cells with black puncta). These cells are
predominantly neurosphere-forming precursor cells.
The adult hippocampus contains two phenotypically
similar populations of quiescent neural precursors that
are activated by different stimuli. Image and art work
courtesy of Dhanisha Jhaveri and Luke Hammond. For
more information, see the article by Jhaveri et al.
(pages 8132–8144).
